Impact Scoping:

ekip

Priority Impact Goals
Describe your Team goals for impact. What are the long-term benefits you hope to deliver?

Actors & Assets
Names of organisations, groups, individuals, infrastructures and investments who will benefit from these impacts, who can help to deliver impacts or who are interested in these impacts for other reasons.

Activities
With those actors and assets, what would be your ongoing collaborative projects or innovation activities? What are the outputs you hope to deliver from these activities?

Indicators
Are there particular impact indicators within or across these activities that you would like to follow? What outcomes (short-term) are you looking for from these activities? What would success look like and how would you communicate this to others? Identify indicators that you could measure to demonstrate that your impact goal(s) have been achieved.

Data
What data, qualitative or quantitative, would you use as evidence to prove that your indicators show success?

Impact Risks & Mitigation
Identify risks that could prevent impacts from being achieved and/or that could lead to negative unintentional consequences. Explain how the identified risks can be mitigated.

Measurement and Collection
Where in the ecosystem is this data? What parts of the ecosystem are you measuring? How would you collect and measure it? What tools would you use? Where would you store it? Where in your ecosystem are you not measuring and why? How can you collect new and emergent data that you're not expecting from your ecosystem's innovations?

Organisational Commitments
Who is reponsible for delivering the impact goals? What training or funding might you need? What are inital actions and your timelines?
